Re: Cold Springs Sewer District No. 1 Project Design Phase

Dear Town of Lysander Residents,

The Town's engineering consultant recently started the required design work for the Cold Springs Sewer District no. 1 project. The first phase of the design will include collection of field data including topographic survey of the project area, wetland delineation, geotechnical borings (borings to determine the depth of bedrock) and existing utility daylighting to verify existing utility locations and depths. The field work referenced above is scheduled to start the week of April 13, 2026 and be completed by May 29, 2026, weather permitting. During the field work phase of the project design you may see survey crews working along the ROW and locating the front corners of your home, wetland scientists placing wetland limit flagging along the limits of wetlands, an ATV mounted drill rig completing the geotechnical borings, and vacuum trucks exposing existing utilities along the project corridor.

Existing utility providers will also be marking the location of existing buried utilities with flags. Please do not remove the utility location flags. The survey field crews will remove the flags once the utility location data has been collected.

Please feel free to contact me directly via phone, (315) 857-0291, or email, engineer@townoflysander.org, if you have any questions or concerns.

Sincerely,

Allen J. Yager, P.E.
Town of Lysander Engineer
