

Dear Residents:

The utility daylighting contractor is scheduled to start working in the project area on Monday May 18th. This work will involve uncovering existing water and gas services and mains using a vacuum truck to verify their horizontal and vertical locations so they can be accurately shown in the sewer design drawings. All excavations made during this field work operation will be backfilled at the end of each workday and topsoil and seed will be placed in any disturbed turf areas.

The geotechnical boring contractor's schedule still has not been finalized but they have indicated that they should be starting their work before the end of next week as well. This work is being performed to verify the depth of bedrock along the proposed sewer installation route. The boring excavations included in this work will also be backfilled at the end of each workday.

The contractors will be removing the utility location flags after all of the work included in this phase of the project has been completed. Please feel free to contact me if you have any questions.

Allen J. Yager, P.E.
